

Lucas Guenebaud

Senior Data, Cloud & ML Engineer

lucas.guenebaud@gmail.com • +33 (0)7 67 67 66 37 • Paris, FR • LinkedIn

Senior Data Engineer with more than eight years of experience designing, industrializing and maintaining large-scale cloud-native data platforms within Agile squads. Expert in Python, Spark and SQL, with strong experience in data-lake architecture, large-scale ETL/ELT pipelines and analytics integration. Proven track record of collaborating with data scientists to move predictive models from prototype to production. Advocate for code quality, automated testing and sound engineering practices across AWS, Databricks and modern MLOps.

PROFESSIONAL EXPERIENCE

Senior Data Engineer

Decathlon • Jan 2023

- ▶ Led migration from legacy pipelines to a cloud-native data platform using AWS, Databricks and Delta Lake, improving throughput and reducing costs.
 - ▶ Designed large-scale Python and Spark ELT pipelines around versioned data contracts, schema enforcement and automated data-quality expectations, improving reliability for downstream data products.
 - ▶ Modernized Databricks lakehouse workloads with Unity Catalog managed tables, liquid clustering and predictive optimization for governed, adaptive data layouts.
 - ▶ Partnered with data scientists to operationalize predictive models and agentic data workflows, including reusable agent skills, agent fleet operations, evaluation, tracing and guardrails.
 - ▶ Embedded GitHub Actions CI/CD, automated testing, observability and governance practices while mentoring engineers across squads.
-

Data Engineer

Matmut • Jan 2022 - Jan 2023

- ▶ Built and optimized big-data pipelines on Cloudera and GCP to serve analytics and machine-learning use cases.
 - ▶ Coordinated with data scientists to deploy models through Vertex AI and DataRobot, orchestrated with Airflow, MLflow and Kubeflow.
 - ▶ Implemented automated tests and monitoring frameworks to ensure continuous data quality and accessibility.
 - ▶ Contributed to data architecture decisions for cross-squad integrations and data-lake enhancements.
-

AI Solution Architect

Renault • Jan 2021 - Jan 2022

- ▶ Designed an embedded AI copilot architecture for next-generation vehicles and coordinated integration with software and data teams.
 - ▶ Ran Agile delivery for a team of five engineers, managing scope, risks and the technical roadmap.
 - ▶ Established DevOps workflows with Azure DevOps and GitLab, improving build and test reliability.
-

Robotaxi Data Engineer

Renault • Jan 2018 - Jan 2021

- ▶ Implemented data mining on autonomous-vehicle sensor and software data with SQL and Python.
 - ▶ Automated data-quality metrics and anomaly detection using Spark and Kubernetes.
 - ▶ Built internal visualization and reporting tools with Bokeh and automated HTML.
-

Robotaxi Simulation Engineer

Renault • Jan 2017 - Jan 2018

- ▶ Prototyped autonomous-parking algorithms in simulation with C++, Docker and SCANeR and validated performance at scale.
- ▶ Applied data science to simulation-generated sensor data for pattern detection and model evaluation.

EDUCATION

Sorbone University - Polytech

Diplôme d'ingénieur in Robotics

- Jan 2013 - Jan 2017

Université du Québec à Chicoutimi (UQAC)

M.Eng. in Software Engineering

- Jan 2016 - Jan 2017

Polytech Marseille

Engineering Preparatory School in Engineering

- Jan 2011 - Jan 2013

CORE COMPETENCIES

CORE ENGINEERING

Python • SQL • Spark • PySpark •
Distributed computing • Streaming

DATABRICKS LAKEHOUSE

Databricks • Delta Lake • Unity Catalog •
Managed tables • Liquid clustering •
Predictive optimization

DATA ARCHITECTURE & CONTRACTS

Data contracts • Schema enforcement •
Schema evolution • Data modelling •
Data products • Medallion architecture

DATA QUALITY & OBSERVABILITY

Data quality expectations • Quality gates
• Data lineage • Monitoring • Data
SLAs/SLOs • Incident diagnostics

CLOUD & PLATFORM

AWS (S3, Glue, EMR, Lambda,
CloudWatch) • GCP (BigQuery, GCS,
Vertex AI) • Kubernetes • Docker •
PostgreSQL • Hive

ORCHESTRATION & DELIVERY

Airflow • dbt • SQLMesh • ETL/ELT •
GitHub Actions • CI/CD • Git •
Automated testing

AI, MLOPS & AGENTS

MLflow • PyTorch • TensorFlow •
Kubeflow • Agent fleet operations •
Reusable agent skills • Agent evaluation
• Tracing & guardrails

ARCHITECTURE & LEADERSHIP

Architecture design • Technical standards
• Cross-functional delivery • Agile/Scrum
• Mentorship • Data governance

FEATURED PROJECTS

Chevalue

- Jan 2025
 - Developed a predictive model for sport-horse performance using graph attention networks and public genealogical graphs, working with data scientists on features and evaluation.
-

Team Fortress 2 European Champion Team Leader

- Jan 2011 - Jan 2014
 - Led a nine-player tactical FPS team to a European title, covering strategy, training, analytics and team operations.

LANGUAGES

French

Native

English

Bilingual (C2) — TOEIC 990/990;
Cambridge Certificate

German

High-school level

INTERESTS

SPORTS

Skiing • Sailing • Swimming • Horse riding • Trekking

INTERESTS

Home renovation • Jazz dance • Lindy Hop • Charleston • Theatre • Technology • Science • Science fiction • Literature • Role-playing games
